Baseline IG

KTNI
K. T. NELSON, INC.

CIGI image generation with X-Plane

EDWARDS AFB

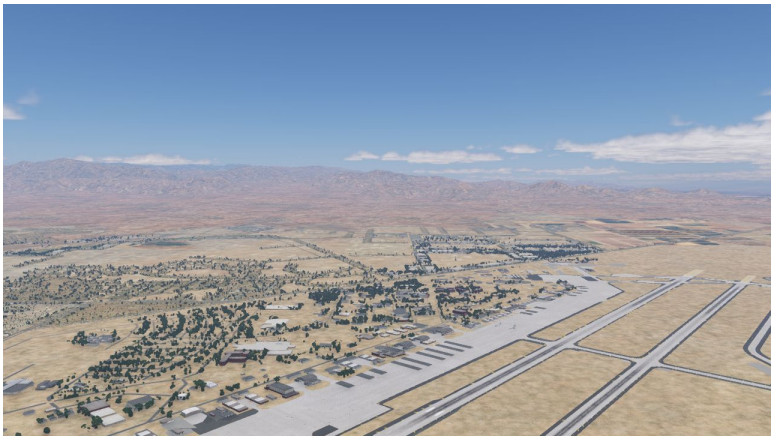

Out-the-window view

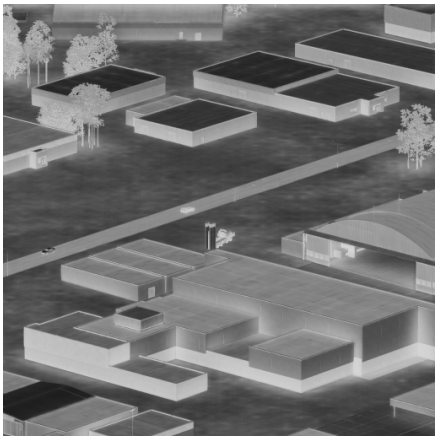

IR-style view | White-hot

NELLIS AFB

Out-the-window view

IR-style view | Black-hot

Your simulation controls the scene.

Host-driven cameras, entities and effects. Independent X-Plane views, managed from one desktop application, with configurable sensor image output.

CONNECT & CONTROL

Unicast / multicast CIGI; camera pointing and zoom; terrain queries; time and environment controls; weapons, trails, smoke and explosions.

RENDER & DELIVER

OpenFlight model conversion; terrain occlusion; visual and white-hot / black-hot imagery; shared-memory image output.

Actual Baseline IG output. IR-style views use a grayscale approximation, not a physical thermal simulation.

Windows x64. X-Plane licensing included. Scenery and model requirements agreed per deployment.

Offline term/perpetual Baseline IG licensing; one renderer-PC license covers all four views.

Integration candidate 0.9.0-rc.2. Performance depends on hardware and scene load; final qualification and terms pending.
